

# Aryza Recover

A simple user interface, completed by the consumer, to gain a clear understanding of their income, outgoings and credit commitments, along with ongoing affordability and vulnerability.

Lenders can view accurate and verifiable information with Aryza Recover, and it automatically provides outcomes to the consumer, tailored to their individual needs.

The tool can be 'white-labelled' and branded to you, becoming an extension of your product offering. Complex rules are configurable within the system allowing you to define affordability, disposable income, and expected consumer contributions. All of this with little or no reliance on contact centre agents.

## The benefits of using Aryza Recover:

### **Unique view of affordability** -

By collating information provided by the consumer and the lender, along with open banking data and credit reference information, Aryza Recover creates a unique view of a consumer's financial position.

**Secure customer access** - Customers can access a dashboard that includes details of their repayment plan, opportunities to switch and save on bills, and a handy benefit checker designed to find opportunities to increase disposable income.

**Customisable journeys** - The system can run a range of strategies across multiple products - allowing different rules and outcomes to be applied to each one, before configuring the outcomes to align with the lender's business objectives.

**Simple configuration** - Set up the software to meet your requirements and align with your business's strategic approach and brand needs, including customised messaging, branding and your own tone of voice.
